Claim Rejections - 35 USC § 102

The following is a quotation of the appropriate paragraphs of 35 U.S.C. 102 that form the basis for the rejections under this section made in this Office action:

A person shall be entitled to a patent unless -

- (b) the invention was patented or described in a printed publication in this or a foreign country or in public use or on sale in this country, more than one year prior to the date of application for patent in the United States.
- (e) the invention was described in (1) an application for patent, published under section 122(b), by another filed in the United States before the invention by the applicant for patent or (2) a patent granted on an application for patent by another filed in the United States before the invention by the applicant for patent, except that an international application filed under the treaty defined in section 351(a) shall have the effects for purposes of this subsection of an application filed in the United States only if the international application designated the United States and was published under Article 21(2) of such treaty in the English language.

Claims 32-44 are rejected under 35 U.S.C. 102(b) as being anticipated by Edwards et al. (US 5935123). Edwards et al. disclose an apparatus and method for protecting spinal nerves and a method for performing spinal disc lesioning comprising inserting a first hollow needle comprising a first thermocouple and a first electrode into a first space between the spinal disc and nerve root; monitoring the temperature near the nerve root and reducing the temperature near the nerve root in response to the monitoring.

Claims 1, 2, 4-10, 17-38 and 41-44 are rejected under 35 U.S.C. 102(e) as being anticipated by Sluijter et al. (US 5433739). Sluijter et al. disclose an apparatus and method for protecting spinal nerves and a method for performing spinal disc lesioning comprising inserting a first hollow needle comprising a first thermocouple and a first electrode into a first space between the spinal disc and nerve root; monitoring the temperature near the nerve root and reducing the temperature near the nerve root in response to the monitoring.

Claims 1, 2, 4-10, 17-38 and 41-44 are rejected under 35 U.S.C. 102(e) as being anticipated by Lettice et al. (US 2002/0120259). In paragraph [0090], Lettice et al. disclose an apparatus and method for protecting spinal nerves and a method for performing spinal disc lesioning comprising inserting a first hollow needle comprising a first thermocouple and a first electrode into a first space between the spinal disc and nerve root; monitoring the temperature near the nerve root and reducing the temperature near the nerve root to the monitoring.

Claim Rejections - 35 USC § 103

The following is a quotation of 35 U.S.C. 103(a) which forms the basis for all obviousness rejections set forth in this Office action:

(a) A patent may not be obtained though the invention is not identically disclosed or described as set forth in section 102 of this title, if the differences between the subject matter sought to be patented and the prior art are such that the subject matter as a whole would have been obvious at the time the invention was made to a person having ordinary skill in the art to which said subject matter pertains. Patentability shall not be negatived by the manner in which the invention was made.

Claims 3 and 39 are rejected under 35 U.S.C. 103(a) as being unpatentable over Sluijter et al. Sluijter et al. teach all of the limitations of the claims except providing a second hollow needle. It would have been obvious to one having ordinary skill in the art at the time the invention was made to provide a second hollow needle, since it has been held to that a mere duplication of the essential working parts of a device involves only routine skill in the art.

Claims 3 and 39 are rejected under 35 U.S.C. 103(a) as being unpatentable over Lettice et al. Lettice et al. teach all of the limitations of the claims except providing a second hollow needle. It would have been obvious to one having ordinary skill in the art

Art Unit: 3739

at the time the invention was made to provide a second hollow needle, since it has been held to that a mere duplication of the essential working parts of a device involves only routine skill in the art.

Page 4

Response to Arguments

Applicant's arguments with respect to the pending claims have been considered but are most in view of the new ground(s) of rejection.

Conclusion

Applicant's amendment necessitated the new ground(s) of rejection presented in this Office action. Accordingly, **THIS ACTION IS MADE FINAL**. See MPEP § 706.07(a). Applicant is reminded of the extension of time policy as set forth in 37 CFR 1.136(a).

A shortened statutory period for reply to this final action is set to expire THREE MONTHS from the mailing date of this action. In the event a first reply is filed within TWO MONTHS of the mailing date of this final action and the advisory action is not mailed until after the end of the THREE-MONTH shortened statutory period, then the shortened statutory period will expire on the date the advisory action is mailed, and any extension fee pursuant to 37 CFR 1.136(a) will be calculated from the mailing date of the advisory action. In no event, however, will the statutory period for reply expire later than SIX MONTHS from the date of this final action.

Application/Control Number: 10/611,667
